FEATS THAT STRONG MEN HAVE PERFORMED.

Athletes Who Pulled Against Horses -Tricks by Which Strength is Pretended-Electro-Magnetic Girls.

Many stories have been told of the strength of certain characters among the Of this number one was of a Roman tribune who went by the name of the Second Achilles, who is said to have killed at different times three hundred of the enemy, and who, when treacherously set upon by twenty-five of sixtieth year, killed fourteen of them before he was slain. Milo, of Crotona, is said to have lifted an ox weighing one thousand pounds, and when he stood upright a number of men could not force him out of his place. Pliny tells of one Athanatus who walked across the stage loaded with a breast plate weighing 500 pounds and buskins of the same weight. But of all the men of prodigious strength of whom we have any account in history is Maximin, the Emperor of Rome, is to be reckoned the foremost. He was by birth a Thracian and a simple herdsman. He was nearly nine feet in height, and said to be the best proportioned man in the Empire. He used the bracelet of his wife as a ring for his thumb. In the theatre, in the presence of all the citizens, he overthrew twelve of the strongest men in wrestling, and outstripped two of the swiftest horses in running all in one day. He could draw a loaded chariot which two strong horses could not move. He could break a horse's jaw with a blow of his fist and his ribs with a kick. This giant gradually rose through all the gradations of office until he came to be Emperor. He reigned for some years, hated by everybody, but so feared on account of his brutality and his physical strength that no one dared to put him to death. He conspired against Alexander Severus and caused him to be murdered in his tent. He also put to death a Roman Senator with four thousand other persons for an alleged conspiracy. Finally the soldiers mutinied

and killed him A. D. 238. Fumus, a native of Seleucia, who was executed by the Emperor Aurelian for espousing the cause of Zenobia, was celebrated for his strength. It is said that he could suffer iron to be forged upon an anvil which was placed upon his breast. This he did by lying on his back, resting his feet and shoulders against some support, thus forming an arch with his body.

In 1578 there lived in Lancashire, England, a man by the name of John Middleton, who was remarkable for the largeness of his stature and for his remarkable strength. His hand was seventeen inches long and his height nine feet three inches. A story is told of an English miner in the eighteenth century, whose finger being caught in a chain at the bottom of a mine, by keeping it forcibly bent he supported by that means the whole weight of his body (150 pounds) until he was drawn up to the surface, a height of six hundred feet. About the year 1703 a native of Kent, England, by the name of Joyce exhibited such feats of strength in London that he received the name of the second Samson. His own personal over the performance. - New York Herald. strength was very great, but he also discovered various positions of the body in which men even of common strength dous weights, and exhibited himself successfully for eight or ten years, but his methods were eventually discovered, and many individuals of ordinary strength exhibited a number of his principal performances.

A German named Van Eckeberg

traveled through Europe in the early part of the eighteenth century under the appellation of "Samson," which then as now, was a favorite name for strong men. This man was of middle size and of ordinary strength, but by certain methods and devices he was able to perform the most extraordinary feats. For instance, sitting upon an inclined board, with his feet a little higher than his hips, the latter being placed against an upright board, well secured, a strong girdle with an iron ring in front was placed around his loins; to this ring a rope was fastened; the rope passed be-tween his legs through a hole in the upright board, against which his feet were braced, and several men or two horses pulling on the rope were unable to draw him out of his place. Again, he fastened a rope to a high post, having passed it through an iron eye fixed in the side of the post lower down, and secured it to his girdle; he then planted his feet against the post near the iron eye, with his legs contracted, and suddenly stretching out his legs broke the rope and fell ackward on a feather bed. He would lie on the ground while a stone of huge dimensions was laid upon his breast and broken with a blow from a great hamown body up, and placing his arms attached to his girdle, a heavy cannon resting on the scale which lay upon rollers upon the floor. When all was ready the rollers were knocked away and the cannon remained supported by the

strength of his loins. It is said that the porters of Constantinople will carry burdens of six hundre 1 man. Many Germans are engaged in and nine hundred pounds weight with this work, but in these artistic days it is ease. Feats of strength have always, strange to hear that they do not obtain whether in real life or in fiction, great much encouragement for carving and the attraction and interest for the human higher forms of their industry. mind; and one of the most strikingly sensational seenes in any novel is that in Victor Hugo's "Les Miserables, where Joan Valjean lifts the weight of a wagon weder which a man is being crushed to

desth. and was a noted athlete, especially in that the late General George B. McClellan possessed also unusual strength, remarkabest authority that on one occasion when expired.

riding a powerful charger in battle, the horse got maddened with excitement and undertook to run away with him, when the General stopped him still in his tracks by the terrible pressure which he exerted on the animal's ribs by simply the pot till every lump is gone. Then pressing against them with his knees. One of the oldest and at the same time

most remarkable exhibitions of mechanical strength and dexterity is that of supporting pyramids. It is described by the Roman poet Claudian, and has been known in Europe ever since. The celebrated Egyptian traveler, Belzoni, before he began his career as an explorer in Egypt performed this feat in various parts of Great Britain. After all, one of the most extraordinary feats of this nature, seeming to be an exercise of strength, and which is really nothing of his countrymen, although then past his the sort, is that in which a heavy man is raised from the floor with the greatest facility by several persons placing each one or two fingers under him. The way this is done is as follows: The heaviest person in the party lies down, say upon two chairs, his legs being supported by one and his head by the other. Four persons-each at one leg and one at each shoulder-then lift the body, and they find the dead weight to be very great, from the difficulty which they find in supporting him. Now let the four persons take hold of his body as before, responding to two signals, to be given by the person to be lifted, by clapping his hands. At the first signal he himself and the four lifters begin to draw a long and full breath, and when the inhalation is completed the second signal is given for raising the person from the chair. To his own surprise and that of his bearers, he rises with the greatest facility as if he were no heavier than a feather. When one of the bearers performs his part illy by making the inhalation out of time the part of the body which he tries to lift, is left, as it were, behind. This is a trick easily tried and very amusing. A few years ago a great deal of excitement was created by the exhibition of a

young Georgia girl alleged to be electromagnetic or otherwise specially gifted, who did some remarkable feats of apparent strength. This young woman inaugurated an epidemic of Georgia girls, who frolicked over the country doing all manner of curious feats and tricks of strength, pulling averaged sized young dudes and mashers around the stage, sitting on chairs, absolutely discomfiting all efforts to lift them, etc. At length Pennsylvania broke out with a similar disorder, the principal instance being a Miss Flora Coyle, a pretty young girl of fifteen, who went to the public school in Pittsburg. This young woman would twist a stick two feet long held by a stout young man, brought up from the audience, quite out of his hands, no matter how much effort he might make to keep hold of it. She did not clasp the stick, but held the palms of her hands against the ends. Two young men, weighing 190 and 178 pounds respectively, essayed to hold an ordinary chair down to the floor, but the little miss, by placing the palms of her hands against the chair, forced them all over the stage. Three men, weighing in the aggregate 533 pounds, then mounted a chair, but she forced them around the stage with apparent ease, though the chair broke with their weight. Four men were then placed upon it, but she did the same with them as with the three, and then the audience howled themselves hoarse

#### The Best Wearing Leather.

But very few people who wear Cordocould perform very surprising feats. He van shoes have any idea where the lrew against horses and raised tremen- leather bearing that name comes from, hence the question is often asked: "What is Cordovan?"

"Cordovan," the name by which leather known, was first finished in Hamburg, Germany, under the name of Ross

In combination with it the hide has four layers of muscular skin which, with the "shell," give to the horse the great and tremendous pulling power that makes the animal so serviceable to mankind. This "shell," if properly tanned and shaven clean of its sinewy matter-a most difficult task-makes the best wearing leather in existence, and proves the theory of old-time shoemakers-that only leather of a long fibre will wear-to be a mistaken one, as the "shell" has no fibre.

In this it has a decided advantage over calfskin with its fibres; the breaking of any one throws additional strain upon the other, and a break in the leather soon follows.

Experience has demonstrated that the "shell" will wear two or three times longer than calfskin.

Cordovan possesses another great ad-

vantage in being nearest waterproof of any leather made. The fineness of texture also permits its taking a very high polish .- New York Journal.

#### Nothing Wasted in Ivory Manufacture.

Almost as much care is taken in the manufacture of ivory to prevent waste as there is in the working of the precious metals. Nothing is lost. The skill of mer. He would lie down upon the the turner shapes the cuttings and corground, and, a man being placed on his ners so that they can be put to the best knees, would draw his heels toward his use. Even the scrapings and sawdust are body, and raising his knees lift the man not thrown away. Such trade-refuse is gradually, till, having brought his knees converted into charcoal, and forms the perpendiculary under him, he raised his well-known "ivory black" of the artist; and, most amazing of all, is even boiled around the man's legs, rose with him and into a jelly which is said to equal calf's set him down on a lew table. Finally he foot. London is a great centre of the was elevated on a framework and a rope fastened to a scale which hung below was course, turned out by the thousand. Then many small workers in brushes, mirrors, boxes, combs, etc., carry on the trade in their own homes. They buy a tooth, or part of one, from the wholesale cealer, use such part of it as they may require for their special branch, and dispose of the remainder to a brother crafts-

### The Office of Iron in the Blood.

Iron exists in the blood in the red corpuscles, and gives them color and the power of absorbing gases. The fact that peroxide of iron is one of the readiest Washington possessed great strength absorbents of gases, and parts with them as readily on exposure in thin layers to leaping. Perhaps it is not as well known the air, so that it can be used over and over again for that work, gives a clew to ts special function in the red corpuscles ble, particularly, for a man who, though of the blood. It enables them readily to compact, wiry and well built, was rather absorb oxygen as they pass along the ander size. General McClellan could minute blood-vessels of the lungs and to bend a big old-fashioned cent double carry it to all parts of the body, where between his thumb and forefinger. they part with it as it is demanded. It Standing on a table he could lift a man is supposed, also, to take up carbonic weighing 160 pounds from the floor by acid in exchange for the oxygen it his coat collar and hold him at arm's | yields up, and to convey to the lungs | length, and it is related of him from the that portion of this substance which is

#### HOUSEHOLD MATTERS.

RICED POTATOES.

Boil a dozen potatoes till they are just done; drain off the water; mash them in add half a cup of boiled milk, a large, heaped teaspoonful of butter and a teaspoonful of salt. Beat the potatoes now with a wooden spoon till they are light and creamy, and pass them as lightly as possible through a colander into the dish into which they are to be served. Set them on the slide of a hot oven for five minutes to be touched with brown, and serve. They may be browned with a salamander or a red-hot shovel .- American Cultivator.

#### PARSNIP FRITTERS.

The nicest way to serve parsnips is in fritters. They are too pronounced in flavor when boiled, or even stewed. Take two or three large parsnips-according to the size of your family-boil them, without peeling or trimming, until tender. Mash them up, and then pass them through a sieve to remove all strings and fiber. To every quart of the parsnip allow four eggs, well beaten, and four tablespoonfuls of sifted flour, or in like proportion for less or more parsnips. Beat the mixture together, seasoning to taste with salt and pepper and a good spoonful of fresh butter; when it is very light drop it by large spoonfuls into boiling lard and when well browned lay on a hot dish before the fire. These should be served at once, as standing don't improve anything that has eggs in it, and is fried. Some people eat them with sugar, like fried egg-plant, but that is a matter of taste. - Good Housekeeping.

LARDED BIRDS. A grouse, a partridge or a quail may be cooked by this rule: A grouse requires about thirty minutes' roasting in a very hot oven, a partridge forty and quail only fifteen minutes. Draw and wash either bird with a clean cloth, not in a pan, and inspect it well, taking out any stray shots or feathers that have been driven into the flesh by shot. A bird that is torn to pieces with fine shot can never be made into as presentable a dish as one shot by a more experienced marksman. The wings of the bird are cut off close to the body, and the neck cut off, but the legs and feet left on. Cut strips of pork the size of matches and run them through the breast and thighs about a quarter of an inch apart; rub the breast of the bird with butter and dredge flour over it, and put half an onion in it. Lay it on its back in a dripping-pan, and roast it till done. Rapidity in reasting is essential to success. All game must be rare, not raw .- New York Tribune.

#### HOUSEHOLD HINTS.

Cheese is almost invariable caten with the fingers by the most particular people. When cooking onions set a tin of vinegar on the stove, let it boil, and you will have no disagreeable smell.

Be sure to keep your dish-cloth clean. as some physicians claim diphtheria will start from using greasy dish cloths.

Flannels should be washed in hot soapsuds, and rinsed in hot water containing soap enough to soften it a little. To take the "fishy" smell from your

skillet after frying fish, put soap and water in the skillet and let boil for ten minutes. Silver should be washed with a chamois

skin saturated with silver soap cach time after use, thus avoiding a general cleaning. A carpet sweeper is invaluable in a dining-room where small children eat,

but should never be used for general sweeping. Windows should never be washed while the sun shines upon them, as it is

impossible to polish them without leav-

ing blue streaks. Take two large spools, drive large nails through them in the wall, about two inches apart, and hang your brocm up, brush end up.

Silk dresses should never be brushed with a whisk broom, but should be carefully rubbed with a velvet mitten kept for that purpose only. When your oil-cloth is dull and be-

ginning to wear out, give it one or two coats of varnish. It will be pretty again, and wear much longer. Never put milk or butter in the cup-

board where cooked cabbage, turnips or onions are, as the smell from them will taint butter or milk in a short time. Chemists say that it takes twice as

much sugar to sweeten preserves, sauce, etc., if put when they begin to cook as it does to sweeten after the fruit is cooked.

Even the leg or other small pieces of a bird is taken in the fingers at fashionable dinners, and at most of the luncheons ladies pick small pieces of chicken without using a fork.

To keep your hanls from chapping, get equal parts of benzine and glycerine, shake well and rub a few drops on the hands after washing them. It will keep them soft and white.

When your pies with upper crusts are ready to put in the oven to bake, take a little sweet milk in a cup, and with a bit of clean cloth wet the upper crust and rim. When baked it will present a shiny surface, and will not flake off.

It is said that bathing the eyes freely in cold water at the morning bath and rubbing them toward the nose with the fingers will prevent the flattening of the eyeball and diminish the need of artificial aid. Some tribes of Indians are said in this way to preserve their sight to old age. For inflamed eyelids bathing in hot salt water is very effective.

#### A Find of Flint.

Year by year fresh traces of the earth's early inhabitants are being revealed. One of the most important of recent discoveries is that of Armand Vire, who, in a French valley through which runs the the Lunain River, has come across the remains of at least ten prehistoric settlements. The immense quantity of flint implements and refuse at one place, near the village of Lorre-le-Bocage, some sixty miles south of Paris, seems to justi'y the conclusion that there must have been located a prehistoric manufacturing village, the flint was worked into various shapes used by the primitive people of the early Stone Age. Some of the implements are of types hitherto unknown to science, including very small stone hatchets, which are supposed to have been funeral or votive offerings, and fint hooks from one to three inches long, the smaller probably having been designed as fish hooks .- New York Tele-

#### The Value of Old Coins.

Old coins now form the basis of one of

the most pronounced crazes in this country. These coins, in both silver and copper American issues, occasionally appear in a general trading or are purchased at very low prices from persons in pressing need of more than their face value. It seems, says the St. Louis Post-Dispatch, like finding money to realize on such coins, or like getting a \$5 gold piece in change as a nickle. The prices in some instances are very good. Half cents, for instance, may run up to \$3, while cents are valued as high as \$5. A certain silver quarter dollar is valued as high as \$20. Dimes are lower, the best price being \$2.50. Half dollars come up to \$20, and dollars to \$250. Half dimes do much better than dimes, and run up to

These coins, however, must be in good condition and not defaced in any way.

#### Where Some Nuts Come From.

The most important item in the nut business is walnuts. Formerly these came almost entirely from Bordeaux, because at that time the affiliations of New York trade in this branch were with France. But the French walnut is comparatively a poor article; the kernel is apt to be shrunken in the shell; the latter is often fiendishly hard, as well the youthful reveler knows, and the flavor of the meat is inferior. The Chicago houses buy perhaps one-tenth of their yearly stock from Bordeaux, a trifling matter of 10,000 or 12,000 bags. The very best come from Naples, for the nuts are the cleanest, and the kernels are full and of fine flavor. Several houses in the trade buy 2000 or 3000 cases each of walnuts from beautiful Naples yearly, and the traffic is constantly increasing. Next in rank come the California walnuts, particularly those of the Las Nietas district, and so much are these liked that a single firm received twenty carloads at a consignment. The Brazil nut, which resembles the meat of the cocoanut, but is very much finer, is beloved in Chicago and in the United States. All the Brazil nuts come from Rio Janeiro.

There was a time when a Christmas dessert was composed of almonds, raisins, figs and filberts, which the French called the four beggars, because no one would touch them-that is, among the adults. To the young Americans almonds and raisins are as dear as ever, and probably to the young French people also. The great rival of California is Spain, and the almonds of Tarragona come to Chicago in considerable amounts. Both of these go to the husking-house, for the bakers and pastry-cooks who use almonds in large quantities prefer to buy them ready for use. Those who have eaten German almond cakes must confess that they are almost as delicious as macaroons, which are nearly all almond. The shelled almonds come to us direct from Italy and through London from the Valley of the Jordan. We get very little of anything from Palestine, but almonds we do get and they are as good as any that come to the trade. But they have not acquired the art which the Californians have picked up from the Spaniards of making their boxes beautiful with showy-colored lithographs, and their boxes are plain, substantial receptacles, nothing more .-Chicago Times.

#### Pains and Aches

In various parts of the body, more particularly in the back; shoulders and joints, are the unwelcome indications that rheumatism has gained a foothold, and you are "in for it" for a longer or shorter period. Rheumatism is caused by lactic acid in the blood, and is cured by Hood's Sarsaparilla, which neutralizes the acidity and eradicates every impucity from the blood.

"I suffered from acute rheumatism induced by a severe sprain of a once dislocated ankle join: which caused great swelling and intense pain. Oas bottle of Hood's Sarsaparilla restored circulation cleansed the blood and relieved the pain so that am nearly well."-L. T. Hunt, Springfield, Mo.

Giant Dancers.

The San Francisco Examiner says the atmospheric conditions of the deserts and high plateaus at certain seasons of the year produce strange phenomena. The dry weather in Nevada has produced a Lost of giant dencers in Lyon County. These appearances are puzzlers to all scientists. How they brace up and hold together so long is a mystery. On a quiet, sunny day you see a little handful of sagebush soar aloft on a light breeze. Some more joins it, until it is as big as your hat, and then your body, and then sand and rocks and soil by the bushel begin to roll into the mass from the ground, ascending upward like a column. It is soon as big as a telegraph pole, and all the time gaining, and ere long its top maybe reaches 1000, maybe b000 feet. While you are watching this one probably three or four others will spring up, or a half-dozen will come waltzing down from the upper end of the valley, having traveled probably twentyfive miles and torn up the soil like a steam plow in their waltzing and zigzagging. They tear up the hillsides, smash horses, and suck up men like waterspouts. They go to pieces in as strange a way as they are formed.

It is stated as an ascertained fact that there are 600,000 pupils in Catholic parochial schools in this country, and 150,000 in schools supported by the Lutherans.

## OWN DOCTOR

By J. Hamilton Ayers, A. M., M. D. This is a most Valua-

ble Book for the Household, teaching as it does the easily-distinguished Symptoms of different Diseases, the Causes and Means of Preventing such Diseases, and the Simplest Remedies which will alleviate or cure.

598 Pages, Profusely

The Book is written in plain every-day English, and is free from the technical terms which render most Doctor Books so valueless to the generality of readers. This Book is intended to be of Service in the Family, and is so worded as to be readily understood by all.

ONLY 60 CENTS POST PAID.
